

Quadrilateral Scavenger Hunt

Today you are searching for 4 different types of quadrilaterals: parallelograms, rhombuses, squares and trapezoids.

Your goal is to find different examples of each shape. But stop when you've found 10 ~ rectangular parallelograms and squares are super easy to find.

While you're searching, think about what makes each of those shapes unique. What is it about the sides and the angles of the vertices that define the shapes?

Walk around your house inside and out. When you find an example of one of the shapes on our scavenger hunt, type in a detailed label. If you'd prefer, print it out so you can make labeled sketches and post the scavenger hunt on your blog.

Parallelogram	Rhombus	Square	Trapezoid
